2020-10-21 | 2020-10-22

## Heading 1

### **One set version**

Example: 1, 2, 3, 4, 5, and so on.

A one set version can work well because changes people only care about are dispute related. This type of versioning is more private, and really makes for a product line to be seamless or its most current version associated to its inception.

### **Two set version**

Example: 1.0, 2.3, and 10.1

If a large change is made, the left set can increase to show that. When I change the left set the right set starts at zero.
